

4. A Home Wireless Router setup--- TP link and Dlink

LAN

MAC Address: 84-16-F9-72-73-36
 IP Address: 192.168.20.1
 Subnet Mask: 255.255.255.0

Wireless

Wireless Radio: Enable
 Name (SSID): CCE
 Mode: 11bgn mixed
 Channel Width: Automatic
 Channel: Auto (Current channel 1)
 MAC Address: 84-16-F9-72-73-36
 WDS Status: Disable

WAN

MAC Address: 84-16-F9-72-73-37
 IP Address: 10.1.8.183 PPPoE(Connect Automatically)
 Subnet Mask: 255.255.255.255
 Default Gateway: 10.1.8.183
 DNS Server: 180.211.129.41, 8.8.8.8
 Online Time: 1 day(s) 01:18:28 Disconnect

Status Help

The **Status** page displays the Router's current status and configuration. All information is read-only.

LAN - The following parameters apply to the LAN port of the Router. You can configure them in the **Network** -> **LAN** page.

- MAC Address** - The physical address of the Router, as seen from the LAN.
- IP Address** - The LAN IP address of the Router.
- Subnet Mask** - The subnet mask associated with LAN IP address.

Wireless - These are the current settings or information for Wireless. You can configure them in the **Wireless** -> **Wireless Settings** page.

- Wireless Radio** - Indicates whether the wireless radio feature of the Router is enabled or disabled.
- Name (SSID)** - The SSID of the Router.
- Mode** - The current wireless mode which the Router works on.
- Channel Width** - The bandwidth of the wireless channel.
- Channel** - The current wireless channel in use.
- MAC Address** - The physical address of the Router, as seen from the WLAN.
- WDS Status** - The status of WDS connection. Init: WDS connection is down; Scan: Try to find the AP; Auth: Try to authenticate; ASSOC: Try to associate; Run: Associated successfully.

WAN - The following parameters apply to the WAN ports of the Router. You can configure them in the **Network** -> **WAN** page.

- MAC Address** - The physical address of the WAN port, as seen from the Internet.
- IP Address** - The current WAN (Internet) IP Address. This field will be blank or 0.0.0.0 if the IP Address is assigned dynamically and there is no connection to Internet.
- Subnet Mask** - The subnet mask associated with the WAN IP Address.
- Default Gateway** - The Gateway currently used by the Router is

TP-Link Router Setup

If you have bought a new TP-Link Router, then configuring the router and setting it up is really easy. You can easily set up your new WP-Link Wi-Fi router and will be able to use it.

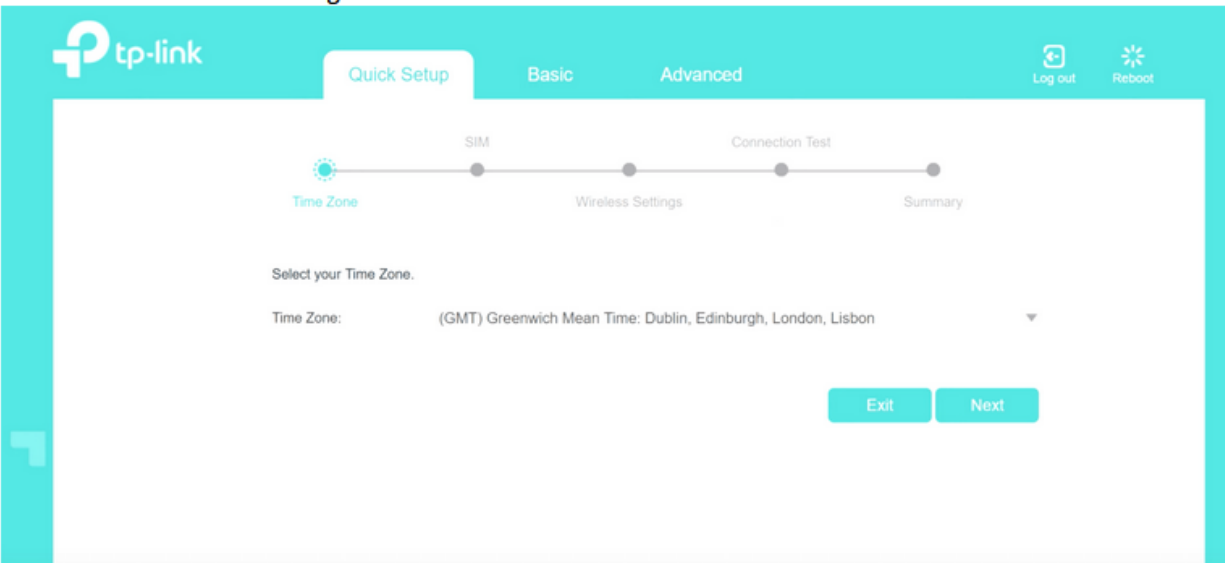

Note: To connect to the internet, the router must be connected to an active modem or data jack

Follow this guide to set up your new TP-Link Router -

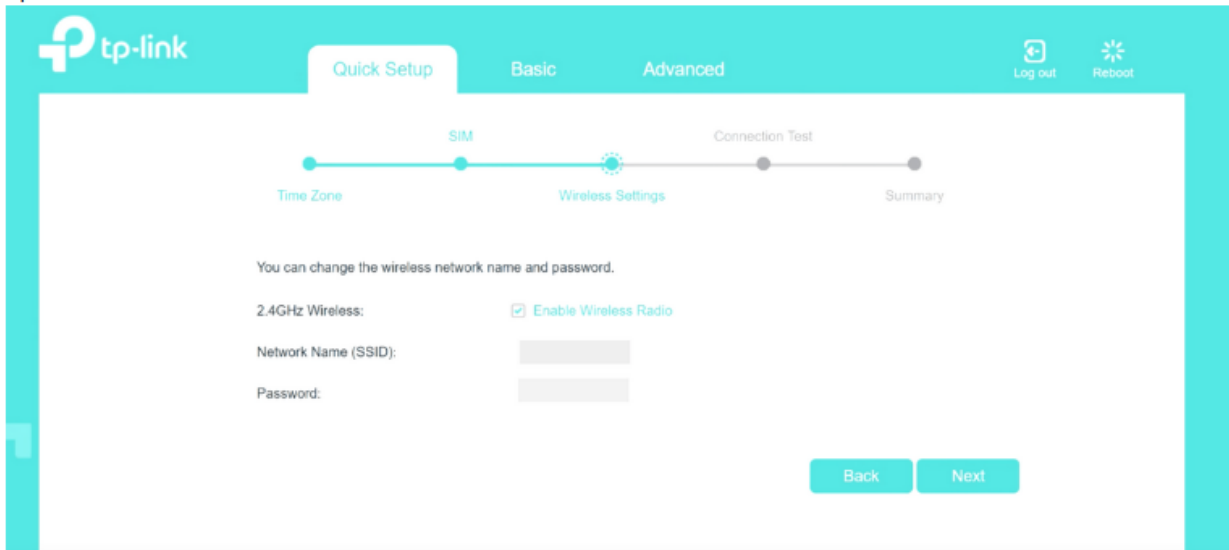

1. Power on the router and connect your PC to the router using an Ethernet cable.
2. Once connected, open a web browser and head over to 192.168.0.1 or www.tplinkwifi.net.

3. Set your router login password by entering it twice. It is preferred to keep it simply – “**admin**”.
4. Click on **Let's Get Started/Login**.

5. Now, follow the on-screen instructions and configure your Internet and Wireless Network using the **Quick Setup** option.

6. Enter the name (**SSID**) for your Wireless Network in the given field and also, set a **password** to secure your Wi-Fi network.

7. Now, you can finish the process, after which you will be able to join the Wireless Connection with the SSID using your password.

192.168.0.1

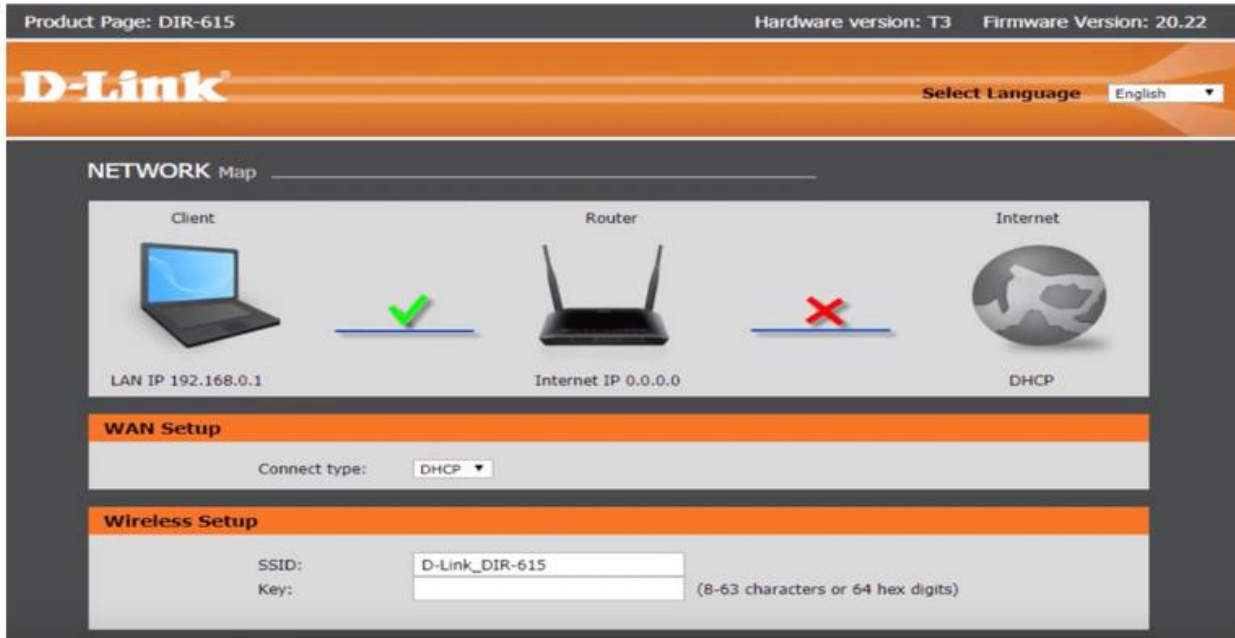

D-Link Router Setup

D-Link Router can be configured in just a few minutes and once you have configured the router and set it up, your Wi-Fi connection will set up and you will be able to connect to the internet through your D-Link Router.

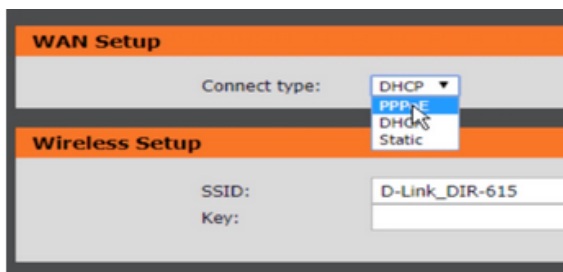

Before proceeding, make sure the ethernet cable is attached to modem or an active data jack to the ethernet port in back of your router.

Follow these steps to set up your D-Link Router –

1. Power on your D-Link Router.
2. Connect your PC to the router using an Ethernet Cable or WiFi.
3. Once your PC is connected, open a web browser and go to <http://192.168.0.1> or <http://192.168.1.1> (The default gateway address may vary from model to model, here is [list of default router IP address](#)).

4. A login page will appear. The default username is admin and the password field is to be left blank. Click on **Log In**.
5. Now, you can configure and set up your router using the **Internet Connection Setup Wizard**.
6. Under **Wireless Setup** enter SSID (WiFi Name) and Key (Password).

7. Under **WAN Setup** choose **Connect type: DHCP/PPPoE/Static** (You can ask your ISP about your internet connection and the required details).
8. After you have configured your internet connection, you can then click on **Save and Connect** and the router will now connect to the Internet.
9. You can then visit the **Wireless Settings** and set up your Wi-Fi Network including its SSID and password.
